# RALEIGH BICYCLES 2013

WE'RE PROUD OF THE NAME RALEIGH

We never forget where we came from. Raleigh is striving to earn a new place in a history that continues to be written. We want to show that a brand can be reputable and relevant at a personal level and be connected with the rider and their experiences. We've taken a long hard look at what drives us to make bikes. We are inspired by the motivation of the full-time office worker who spends their free time training for a race or event. We enable the passion that drives people to ride the most they've ever ridden a bike for the sake of charity. We are driven by what motivates a former national champion to return to full-form and give younger riders...a run for their money. We are moved by the determinations of a small group of devoted riders to create a movement.

In the end we believe it's all about earning your place. About crossing the finish line knowing it came from hard work and dedication. About exceeding contribution goals and persevering the challenge. About showing a new generation that the spirit of a champion never expires. Raleigh is about the passion to see your dreams through. And knowing you earned everything at the end of the day. This is what we strive for. This is what Raleigh is.

RALEIGH 2013

# ROAD

RACE / RACE ENDURANCE / ENDURANCE / CYCLOCROSS / STEEL

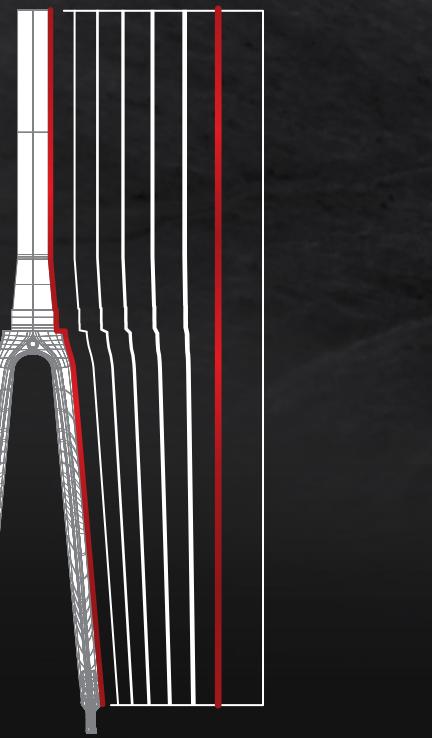

### MONOCOQUE CARBON STEER

Reduces flex and twisting  
for more control in tight  
situations

### FULL MONOCOQUE AND ONLY 365G

### TAPERED STEER TUBE

Increases overall stiffness

### CONTINUOUS CARBON FIBER

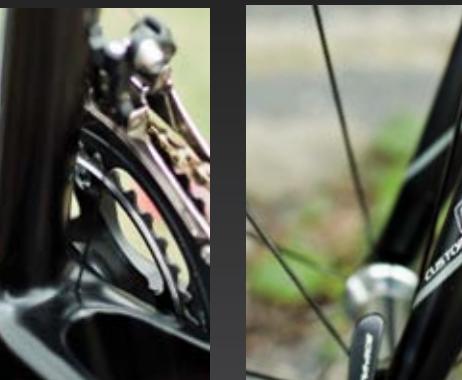

Dampens road vibrations

## DIRECT CONNECT CARBON EVOLUTION

Over five years ago we began producing frames with our Direct Connect Carbon process. Steadily and patiently we have refined, tested and evolved the process to create the lightest, stiffest, most durable race frame available. We used oversized BB and chainstays to minimize flex and increase power transfer, and thinned seatstays that are vertically compliant and absorb road vibrations.

Utilizing T800-grade High Modulus carbon with high tensile strength, never-twisted fiber we reduced the amount of material needed in key areas, combined with a Max Internal Compression process the result is an ultra-thin, stiff, and internally smooth tube surface. Using these combined techniques, we were able to substantially reduce the weight, resulting in a 880g frame that sacrifices nothing & maximizes everything.

### EACH MODEL IS BUILT WITH T700 CARBON

T700 is a high-tensile strength high modulus, never-twisted fiber that offers the best performance for demanding conditions.

### DIRECT CONNECT CARBON

Every tube is molded with the highest strength-to-weight ratio in mind, and the tubes are just as smooth on the inside as they are on the outside because of Max Internal compression process that removes all excess material.

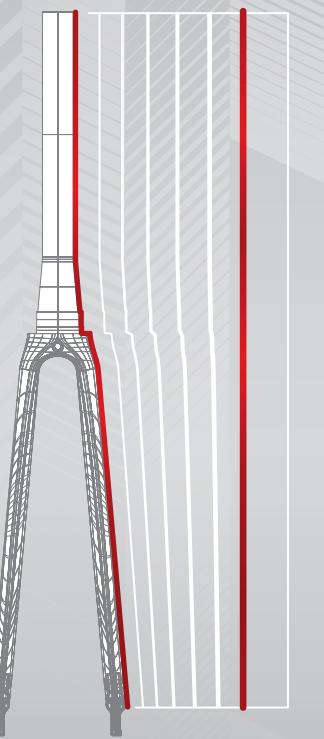

Revenio and Capri combine the tapered headtube, attributes of our high-end race bikes, and our proven RE2P (Relaxed Ergonomic Effective Position) geometry, that places the rider in the ultimate riding position for optimal endurance and performance. The frames produce a ride that is stiff, lively, and compliant, While tipping the scales at a mere 980g.

### MONOCOQUE CARBON STEER

Reduces flex and twisting for more control in tight situations

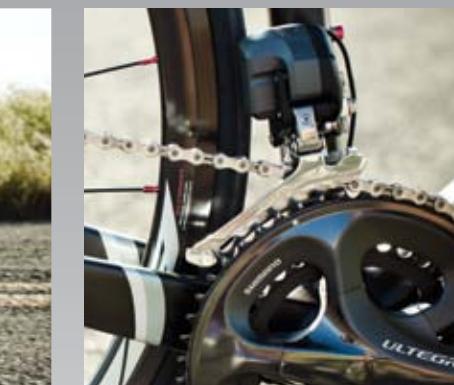

### FULL MONOCOQUE AND ONLY 365G

### CONTINUOUS CARBON FIBER

Dampens road vibrations

# CYCLOCROSS

In the Pacific Northwest, Cyclocross is right in our own backyard. The quality of our Cyclocross is raw and rigorous. Our races are loud, our mud is deep, and our barriers are unmovable. The sport of CX has changed here over the last five years. The races have become faster. The fields have become deeper. This has made the Pacific Northwest a perfect environment for us to develop the best and broadest CX line on the market.

## STEEL

Steel is as timeless as the company that started using it 125 years ago. No matter the latest technology, the trending fad, or the passing fancy...steel has proved to be our choice material for the bikes that have helped to define the Raleigh brand. This year we expand our line of steel bikes yet again not based on a trend, but based on steel being the best material for what these bikes can do for you now, and years down the road.

# MOUNTAIN

29" HARDFAIL / 26" RECREATION

## INTEGRATED KEVLAR® TECHNOLOGY

The Talus 29 Carbon Series uses our new IKT (Integrated Kevlar® Technology) process that blends Kevlar® and High Modulus carbon to protect the frame from debris that the trail throws at it. Combining this technology with a tapered headtube for added steering control, and internal cable routing for protected lines and a clean look, WE CREATED A 1080g XC DREAM FRAME.

In the early days of mountain biking, Raleigh was at the forefront of MTB technology and took it to its limits. With the introduction of our IKT-reinforced Direct Connect frame, WE'RE READY TO TAKE IT THERE AGAIN.

## TALUS 29 CARBON PRO

FRAME	Direct Connect Carbon, Kevlar Reinforced Tapered Headtube, E-Thru 142x12, Internal Cable Routing	SHIFTER	SRAM XO Trigger, Shimano SP41 Shift Housing	RIMS	Easton EA90 29er, 15mm F and 142x12 R

**INTENDED:** For cyclo-cross riding, training and racing. Cyclo-cross involves riding on a variety of terrain and surfaces including dirt or mud surfaces. Cyclo-cross bikes also work well for all weather rough road riding and commuting.

**NOT INTENDED:** For off road or mountain bike use, or jumping. Cyclo-cross riders and racers dismount before reaching an obstacle, carry their bike over the obstacle and then remount. Cyclo-cross bikes are not intended for mountain bike use. The relatively large road bike size wheels are faster than the smaller mountain bike wheels, but not as strong.

## CLASSIFICATION

**Understand your bike and its intended use. Choosing the wrong bicycle for your purpose can be hazardous. Using your bike the wrong way is dangerous.**

No one type of bicycle is suited for all purposes. Your retailer can help you pick the "right tool for the job" and help you understand its limitations. There are many types of bicycles and many variations within each type. There are many types of mountain, road, racing, hybrid, touring, cyclocross and tandem bicycles. There are also bicycles that mix features. For example, there are road/racing bikes with triple crank. These bikes have the low gearing of a touring bike, the quick handling of a racing bike, but are not well suited for carrying heavy loads on a tour. For that purpose you want a touring bike. One can optimize a bicycle for their specific purpose within a classification, so do your homework. Visit your bicycle shop and find someone with expertise in the area that interests you. Seemingly small changes such as the choice of tires can improve or diminish the performance of a bicycle for a certain purpose. On this page, we generally outline the intended uses of various types of bikes. Industry usage conditions are generalized and evolving. Consult your dealer about how you intend to use your bike. For more information, please see the Raleigh Owner's Manual.

### HIGH-PERFORMANCE ROAD

**CONDITION 1:** Bikes designed for riding on a paved surface where the tires do not lose ground contact.

**RALEIGH MODELS INCLUDED:**  
Militis Series, Revenio Series, Capri Series, International, Record Ace, Grand Prix, Clubman, Rush Hour, Cadent Series, Alysa Series
